Postsecondary Student Employment Outcomes

The Ohio Department of Higher Education has created this dashboard to provide detailed information on the employment outcomes of Ohio graduates. This dashboard relies on data from Post-Secondary Employment Outcomes (PSEO), a project led by the federal Census Bureau. The PSEO reported data is limited only to partner institutions, but the data matching of graduates extends to employment records for every state, regardless of PSEO participation.

In this dashboard, the employment outcomes for Ohio graduates of PSEO partner institutions can be broken out by degree level, field of study, years of graduation, and more, allowing for the greatest understanding to date of the effect of those factors on the short- and long-term earnings and employment of Ohio graduates.

The dashboard is available here:
